Chapter 1

Switch Installation

This guide shows you how to install the FORMULA 8200 fiber switch from Allied Telesyn International Corp., shown in Figure 1 and Figure 2.

Figure 1: The FORMULA 8200 Fiber Switch Models (AT-8208F/SC and AT-8216F/SC)

Figure 2: The FORMULA 8200 Rear Panel

Overview

The FORMULA 8200 includes the following hardware and software features:

- ❑ Eight or sixteen 100Base-FX, full duplex, dual SC fiber ports
- ❑ Flow control to autosense buffer limits on the transmit port
- ❑ Front panel LEDs that provide operating status and a **Reset** button for front panel control of switch
- ❑ RS-232 console port interface for local switch management or Telnet support for remote switch management
- ❑ Rack mount or table mount capabilities
- ❑ Support for multiple optional hardware and port configurations:
 - 10/100Base-TX expansion ports
 - OC3 ATM uplink card
 - FDDI uplink card
- ❑ Virtual LAN (VLAN) support for up to 16 VLANs
- ❑ Virtual routing to provide switching between VLANs
- ❑ Loop detection using Spanning Tree Protocol (IEEE 802.1d)
- ❑ Port mirroring to allow monitoring of one's port activities from another port
- ❑ Support for RMON Groups 1,2,3, and 9
- ❑ Simple Network Management Protocol (SNMP) agent for Management Information Bases (MIB) II and a private enterprise MIB
- ❑ TFTP and Zmodem support for software upgrades and backup

Verifying Your Switch Package

Your FORMULA 8200 package consists of:

- One FORMULA 8200 fiber switch, either the 8-port AT-8208F/SC or the 16-port AT-8216F/SC
- Rackmounting kit that includes brackets and screws for the rackmounting option
- Four feet for the desktop mounting option
- AC power cord (U.S.A. only)
- This installation guide

If any of these components are damaged, contact your shipping carrier representative. If any components are missing, please phone the Allied Telesyn. Refer to Appendix D, "Where To Find Us," on page 23.

Prerequisites for Switch Installation

Before installing the FORMULA 8200, make sure your site meets the following requirements:

- Power: 90-264 VAC, 47-63 Hz, 3-6A
- Temperature: 0° ~ 40°C
- Humidity: 85% maximum relative humidity, noncondensing

Refer to Appendix A for a summary on product specifications.

Ventilation

The switch has an internal fan module. For the fan to function correctly, you must not block the ventilation openings which are located at the rear and the sides of the chassis.

Power

Power connections for each unit should be able to provide 120 VAC for North American models or 240 VAC for international models. It is advisable to use dedicated power circuits or power conditioners to supply power to the network devices. This aids in isolating network equipment from electrical power interference.

Location

Install the FORMULA 8200 on a sturdy, level surface in a ventilated area that is dust free and away from heat vents, warm air exhaust from other equipment, and direct sunlight. Avoid proximity to large electric motors or other electromagnetic equipment.

Refer to Appendix A, “Product Specifications for the FORMULA 8200 Switch,” for a summary of installation specifications.

Installing the FORMULA 8200 on the Desktop

1. Set the switch on the flat surface. Allow at least 2 inches on the right side of the switch for proper ventilation and 5 inches in the back for power cord clearance.
2. Use the plastic screws provided to attach the four rubber feet to each marked location on the bottom of the chassis (Figure 3).

Figure 3: Installing the Rubber Feet

3. Attach the power cord to the back of the switch. Then attach the other end of the power cord to a grounded AC power outlet.
4. Proceed to the section, “Attaching a Console to the Switch.”

Installing the FORMULA 8200 in the Rack

Caution

When mounting the switch in a rack, do not stack units directly on top of one another.

1. If the rubber feet are attached, remove them.
2. Attach the mounting brackets to the side of the switch using the M4 x 8 mm screws provided (Figure 4).

Caution

Use only the M4 x 8 mm screws provided. Longer screws may contact the internal components, damaging the unit.

Figure 4: Attaching the Mounting Brackets

3. Align the holes in the mounting brackets to the holes in the rack (Figure 5) and secure with the screws provided.

Figure 5: Rackmounting the Switch

4. Attach the power cord to the back of the switch. Then attach the other end of the power cord to a grounded AC power outlet.
5. Proceed to the section, "Attaching a Console to the Switch."

Attaching a Console to the Switch

You need the following equipment:

- ❑ A terminal or TTY-compatible terminal, or a portable computer with a serial port and the ability to emulate a VT100 terminal
 - ❑ A UL-listed null modem RS232 cable with a female DB9 connector for the console port on the switch and with a connector on the other end that is appropriate for your computer or terminal
1. Set the terminal protocol as follows:
 - 9600 baud
 - No parity
 - 8 bits
 - 1 stop bit
 - Window terminal emulation option set to **No**
 - Terminal preferences: **Function**, **Arrow**, and **Control** keys active
 2. Connect the terminal (or a computer in terminal-emulation mode) to the switch's console port using the RS232 cable. Then turn on the terminal.
 3. Proceed to the section, "Powering Up and Initializing the Switch."

Powering Up and Initializing the Switch

Power on the switch.

The switch goes through a power-on self test (POST) to verify that all components are functioning properly. The console displays messages similar to the following screen:

Note

Report any error messages to Allied Telesyn's Technical Support department. Refer to Appendix D, "Where To Find Us," for contact information.

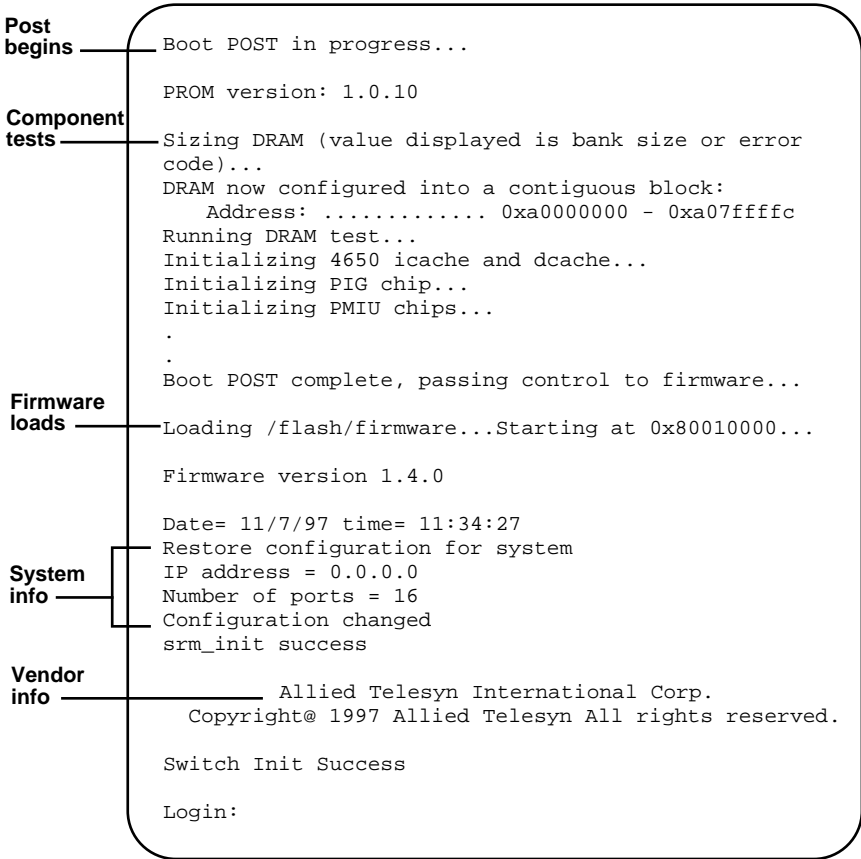

Figure 6: FORMULA 8200 POST Messages

4. Observe the LEDs for normal switch operation (Figure 7 and Table 1).

Figure 7: Close-Up of the FX Port LEDs

Table 1: FORMULA 8200 FX LED States

LED	Description
Status	Flashing green means the system-wide operation is normal.
	Solid green means the switch is locked up and you probably cannot log in. Reboot the switch.
	Flashing amber means the switch is completing a DRAM test during a power on self test (POST); otherwise, there may be problems. Reboot. If the LED state does not change, contact Allied Telesyn's Technical Support.
	Solid amber means the switch is still functioning, but with problems. Try to solve the problems; otherwise, reboot.
Power	Solid green means power is applied and operation is normal.
	Off means there is no power to the switch. Check the power cord and power source. Turn off and on. Replace the switch if LED remains unlit.
Port LED: Activity	Flashing or solid green means the port is receiving or transmitting traffic.
	Off means there is no traffic. This LED state does not indicate a problem.
Port LED: Collision	This LED is always off . It is not supported on the FORMULA 8200 fiber switch because collisions do not occur on full duplex FX ports.
Port LED: Link	Solid green means the cable's link status is good.
	Off means there is no link; flashing means there is a link problem. Verify cable and port speed supported on end device (FX ports are 100Mbps full duplex only).
Diag	This LED is normally off . This LED is reserved for factory use.

At initial startup, the switch operates at the default parameters listed in Table 2. If you want to change these settings, refer to the *FORMULA 8200 User's Guide* available from Allied Telesyn's website at www.alliedtelesyn.com/manuals.htm for detailed procedures on how to:

- Set the switch's IP address, subnet mask, and gateway address
- Change the default login and password for security reasons
- Verify the Ethernet port configuration

Table 2: Default Fiber Switch's Parameters

Parameter	Default Value
System login	admin
System password	switch
Admin Status	Enabled
IP Address	0.0.0.0
IP Subnet Mask Address	0.0.0.0
Default Gateway Address	0.0.0.0
Spanning Tree Protocol	Enabled
Port Path Cost	10
Port Priority	128
Half or Full Duplex	Full duplex on FX ports
Port Speed	100 Mbps on FX ports
Autonegotiation	Off; not applicable to FX ports
Spanning Tree Priority	32768
Active Aging Time	300 seconds
Hello Time	2 seconds
IP RIP Mode	Silent
VLAN	All ports to a default VLAN #1
Console	9600, 8, N, 1

5. Log in at the prompt:
 - Log in as **admin**.
 - Enter the default password, **switch**.
6. Enter **SYSTEM/SHOW** and verify the firmware and IP information. Make sure the firmware version displayed on the screen matches the version of the *Release Notes* and the *User's Guide* you will be downloading from Allied Telesyn's website (described later on page 11).

If you want to configure the IP parameters (IP address, subnet mask, and gateway address), use the **BOOT/IP/CONFIG** command.

Note

You must enter a unique IP address for the switch if you plan to manage the switch via Telnet or SNMP.

7. Enter **ETHERNET/SHOW/PORT** to verify your port configuration. The following screen shows the initial configuration for the FORMULA 8200 with 8 FX ports:

```
/ETHERNET/SHOW> port

Physical Port#   Autoneg   Speed     Duplex
=====
1                off       100MBPS   FULL
2                off       100MBPS   FULL
3                off       100MBPS   FULL
4                off       100MBPS   FULL
5                off       100MBPS   FULL
6                off       100MBPS   FULL
7                off       100MBPS   FULL
8                off       100MBPS   FULL
```

Note

You cannot change the port settings on the display.

Connecting Devices to the Fiber Ports

Connect the switch to any equipment that conforms to IEEE 802.3u standard, such as Ethernet networking devices, workstations, servers, other full duplex switches, or bridges that support 100Base FX.

1. Remove the dust caps only from the FX ports you intend to use.

Caution

Always leave the dust caps on unused ports to protect the fiber ports from dust.

2. Connect devices to the ports, **one at a time** (Figure 8).

Figure 8: Attaching Fiber Cables to the FX Ports

Dual SC cable connectors are keyed so you can insert them only one way. If your cable is not keyed, note that the Receive cable is on the right and the Transmit cable is on the left.

3. Verify the correct link and status condition for every port-to-device connection before proceeding to the next connection. See Table 1 for a description of port LED activity.
4. Attach additional networking cables as appropriate.

Where to Go Next

Go to Allied Telesyn's website at www.alliedtelesyn.com/manuals.htm and download the following documents:

- ❑ *FORMULA 8200 User's Guide* for the commands to configure and monitor the switch
- ❑ *FORMULA 8200 Software Release Notes* for the latest information on your switch software version

Sample Networking Applications

Workgroup LAN Switching Example

Backbone LAN Switching Example

Optional ATM Backbone Connectivity Example

Chapter 2

Troubleshooting

This chapter provides information on isolating and resolving problems with FORMULA 8200 operation.

Ethernet networks tend to be fairly simple, but they can still have problems that take time to resolve. The most common problems are associated with the actual network cabling.

If you have problems with a newly established network (initial setup), the trouble is most likely related to cabling or addressing. If the network has been operational for an extended period and is now beginning to have problems, the trouble is probably related to recent additions or changes to the network, or configuration settings on your switch.

Note

If you have trouble performing any of the steps in this chapter, or if you have questions not covered in this manual, contact Allied Telesyn's Technical Support Department. See Appendix D, "Where To Find Us," for contact information.

Areas to Check

The following pages describe the areas to check when troubleshooting the switch:

- LED status
- IP Addressing
- Network cabling

Checking LED Status

The switch has system LEDs (Status and Power), located on the front panel, that indicate the switch's overall operational status. For the location of these LEDs, see the encircled area in Figure 9.

Figure 9: Switch System LEDs

Additionally, each FX port has a set of LEDs to the right. For a closeup view of the FX LEDs, see Figure 10.

Figure 10: FX Port LEDs

Table 3 describes how these LEDs report on the switch and ports' status, and what you need to do in case of a problem.

Table 3: LED States and Recommended Action

LED	Description and Action Required
Status	Flashing green means the switch's system-wide operations are normal.
	Solid green means the switch software is locked up and you probably cannot log in. Reboot the switch.
	Flashing amber means the switch is completing a DRAM test during a power on self test (POST); otherwise, there may be problems. Reboot. If the LED state does not change, contact Allied Telesyn's Technical Support.
	Solid amber means the switch is still functioning, but with problems. Try to determine the cause of the problem without rebooting the switch. If all else fails, reboot.

Table 3: LED States and Recommended Action (Continued)

LED	Description and Action Required
Power	Solid green means power is applied and the switch is functioning normally. No action is required.
	Off means there is no power to the switch. Check the power plug and the state of the on/off switch in the back of the unit. If On, turn it off, wait a few seconds, and turn it on. If LED remains unlit, replace the switch.
Port LED: Activity	Flashing or solid green means the port is receiving or transmitting traffic. No action is required.
	Off means there is no traffic. This state does not indicate any problem on that port. No action is required.
Port LED: Collision	This LED is always Off . It is not supported on the FORMULA 8200 fiber switch because collisions do not occur on full duplex FX ports. No action is required.
Port LED: Link	Solid green means the cable's link status is good.
	Off means there is no link; flashing means there is a link problem. Verify cable and port speed supported on end device (FX ports are 100Mbps full duplex only).
Port LED: Diag	This LED is normally off . This LED is reserved for factory use.

IP Addresses

The FORMULA 8200 has a factory-assigned unique MAC address but does not have a default IP address. If you are managing the switch from a console, an IP address is not required. However, if you are managing the switch over the network (via SNMP or Telnet), the switch must have a valid IP address.

Assign a unique IP address to the switch by using the **BOOT/IP/CONFIG** command. See the *FORMULA 8200 User's Guide*, available from www.alliedtelesyn.com/manuals.htm, for more details.

Cabling

The fiber media adapter for the 100Base-FX port uses only multimode 62.5/125 micron, 1300 nm fiber cable. The 100Base-FX media adapter is not supported on single-mode fiber. All fiber port connections use dual SC connectors.

Appendix A

Product Specifications for the FORMULA 8200 Switch

Network Protocol	Fast Ethernet
Standards Supported	IEEE 802.1d IEEE 802.3u, 100Base-X
Data Rate	100 Mbps multimode fiber
Hardware Architecture	
Processor	MIPS 4650
Processor DRAM	8 Mbytes
Flash memory	2 Mbytes
Physical Specifications	
Dimensions	3.5"H x 17" W x 18"D (8.97 x 43.6 x 46.2 cm)
Weight	19 lbs (8.6 kg)
Electrical Specifications	
Input line frequency	47-63 Hz
Input current	3-6 Amps
Input voltage	90-264 VAC, auto-selectable
Environmental Specifications	
Operating temperature	0° to 40° C (32° to 104° F)
Storage temperature	-20° to 60° C (-18° to 148° F)
Operating humidity	85% maximum relative humidity, noncondensing
Storage humidity	95% maximum relative humidity, noncondensing
Operating altitude	0 to 10,000 ft.

Electromagnetic Immunity

RF susceptibility EN61000, Level 4/3

Electrostatic discharge (ESO) EN61000, Level 4/2

Electric Fast Transitions EN61000, Level 4/4

Electromagnetic Emissions

FCC Class A digital devices
En 55 022 Class A
VCCI Class 2 ITE

Safety Agency Approvals

UL/cUL Listed (UL1950)
CSA Accepted
TUV Licensed (IEC950-A2, 1993)
Meets CE Conformity Standards (CE on file)
