Allied Telesis™

x210 Series

Enterprise Edge Switches

Allied Telesis x210 Series Layer 2+ switches offer an impressive set of features in an affordable package, ideal for applications at the network edge.

AlliedWare Plus™
OPERATING SYSTEM

Overview

The Allied Telesis x210 Series is a reliable and value-packed solution for today's networks. With a choice of 9-, 16- and 24-port versions, each with one or more SFP uplinks, the x210 Series switches are ideal for applications at the edge of the network where security and manageability are the key requirements.

Secure

Network security is guaranteed, with powerful control over network traffic types, secure management options, and other multi-layered security features built right into the x210 Series switches.

Allied Telesis x210 switches use 802.1x port-based authentication, in partnership with standards-compliant dynamic VLAN assignment, to assess a user's adherence to network security policies and either grant access or offer remediation. Tri-authentication ensures the network is only accessed by known users and devices. Secure access is also available for guests.

Security from malicious network attacks is provided by a comprehensive range of features such as DHCP snooping, STP root guard, BPDU protection and access control lists. Each of these can be configured to perform a variety of actions upon detection of a suspected attack.

Network Protection

Advanced storm protection features include bandwidth limiting, policy-based storm protection and packet storm protection.

Network storms are often caused by cabling errors that result in a network loop. Allied Telesis x210 Series switches provide features to detect loops as soon as they are created. Loop detection and thrash limiting take immediate action to prevent network storms.

Manageable

The x210 runs the advanced AlliedWare Plus™ fully featured operating system, delivering a rich feature set and an industry-standard CLI. Which, combined with a powerful web-based GUI, reduces training requirements and is consistent across all AlliedWare Plus devices, simplifying network management.

Powerful Network Management

Meeting the increased management requirements of modern converged networks, Allied Telesis Management Framework™ (AMF) automates many everyday tasks including configuration management. The complete network can be managed as a single virtual device with powerful centralized management features.

AMF secure mode increases network security with management traffic encryption, authorization, and monitoring.

Silent Fan-less Operation

The x210 Series features compact models that are highly reliable and run silently, making them the ideal choice for placement on a desktop or in a dusty environment, without affecting their expected lifetime.

New Features

- ▶ AMF secure mode
- ▶ Active Fiber Monitoring
- ▶ ACLs for management traffic
- ▶ VLAN Mirroring (RSPAN)

EPSRing™

AMF™

ACTIVE Fiber Monitoring™

NETWORK SMARTER

Key Features

Allied Telesis Management Framework (AMF)

▶ Allied Telesis Management Framework (AMF) is a sophisticated suite of management tools that provide a simplified approach to network management. Common tasks are automated or made so simple that the every-day running of a network can be achieved without the need for highly-trained, and expensive, network engineers. Powerful features like centralized management, auto-backup, auto-upgrade, auto-provisioning and auto-recovery enable plug-and-play networking and zero-touch management.

▶ AMF secure mode encrypts all AMF traffic, provides unit and user authorization, and monitors network access to greatly enhance network security.

Easy to Manage

▶ The AlliedWare Plus operating system incorporates an industry standard CLI, facilitating intuitive manageability.

▶ With three distinct modes, the CLI is very secure, and the use of SSHv2 encrypted and strongly authenticated remote login sessions ensures CLI access is not compromised.

▶ As a Layer 2+ switch, a static route can be added to allow a user in a different subnet to manage the switch.

Storm Protection

Advanced packet storm control features protect the network from broadcast storms:

▶ Bandwidth limiting minimizes the effects of the storm by reducing the amount of flooding traffic.

▶ Policy-based storm protection is more powerful than bandwidth limiting. It restricts storm damage to within the storming VLAN, and it provides the flexibility to define the traffic rate that creates a broadcast storm. The action the device should take when it detects a storm can be configured, such as disabling the port from the VLAN or shutting the port down.

▶ Packet storm protection allows limits to be set on the broadcast reception rate, multicast frames and destination lookup failures. In addition, separate limits can be set to specify when the device will discard each of the different packet types.

Loop Protection

▶ Thrash limiting, also known as Rapid MAC movement, detects and resolves network loops. It is highly user-configurable — from the rate of looping traffic to the type of action the switch should take when it detects a loop.

▶ With thrash limiting, the switch only detects a loop when a storm has occurred, which can potentially cause disruption to the network. To avoid this, loop detection works in conjunction with thrash limiting to send special packets, called Loop Detection frames (LDF), that the switch listens for. If a port receives an LDF packet, one can choose to disable the port, disable the link, or send an SNMP trap.

Spanning Tree Protocol (STP) Root Guard

▶ STP root guard designates which devices can assume the root bridge role in an STP network. This stops an undesirable device from taking over this role, where it could either compromise network performance or cause a security weakness.

Bridge Protocol Data Unit (BPDU) Protection

▶ BPDU protection adds extra security to STP. It protects the spanning tree configuration by preventing malicious DoS attacks caused by spoofed BPDUs. If a BPDU packet is received on a protected port, the BPDU protection feature disables the port and alerts the network manager.

Access Control Lists (ACLs)

▶ The x210 Series features industry-standard access control functionality through ACLs. ACLs filter network traffic to control whether packets are forwarded or blocked at the port interface. This provides a powerful network security mechanism to select the types of traffic to be analyzed, forwarded, or influenced in some way. An example of this would be to provide traffic flow control.

Tri-authentication

▶ Authentication options on the x210 Series also include alternatives to 802.1x port-based authentication, such as web authentication, to enable guest access and MAC authentication for end points that do not have an 802.1x supplicant. All three authentication methods—802.1x, MAC-based and Web-based—can be enabled simultaneously on the same port, resulting in tri-authentication.

VLAN Mirroring (RSPAN)

▶ VLAN mirroring allows traffic from a port on a remote switch to be analysed locally. Traffic being transmitted or received on the port is duplicated and sent across the network on a special VLAN.

Dynamic Host Configuration Protocol (DHCP) Snooping

▶ DHCP servers allocate IP addresses to clients, and the switch keeps a record of addresses issued on each port. IP source guard checks this against the DHCP snooping database to ensure only clients with specific IP and/or MAC addresses can access the network. Combining DHCP snooping with other features, like dynamic ARP inspection, increases security in Layer 2 switched environments. This also provides a traceable history, which meets the growing legal requirements placed on service providers.

UniDirectional Link Detection

▶ UniDirectional Link Detection (UDLD) is useful for monitoring fiber-optic links between two switches that use two single-direction fibers to transmit and receive packets. UDLD prevents traffic from being sent across a bad link by blocking the ports at both ends of the link in the event that either the individual transmitter or receiver for that connection fails.

▶

EPSRing™ (Ethernet Protection Switched Ring)

▶ EPSRing allows several x210 switches to join a protected ring capable of recovery within as little as 50ms. This feature is perfect for high availability in enterprise networks.

Link Aggregation

▶ Link aggregation allows a number of individual switch ports to be combined, forming a single logical connection of higher bandwidth. This provides higher performance link, and also provides redundancy for a more reliable and robust network.

Active Fiber Monitoring

▶ Active Fiber Monitoring prevents eavesdropping on fiber communications by monitoring received optical power. If an intrusion is detected, the link can be automatically shut down, or an operator alert can be sent.

Voice VLAN

▶ Voice VLAN automatically separates voice and data traffic into two different VLANs. This automatic separation places delay-sensitive traffic into a voice dedicated VLAN, simplifying QoS configuration.

Find Me

▶ In busy server rooms comprised of a large number of equipment racks, it can be quite a job finding the correct switch quickly among many similar units. The "Find Me" feature is a simple visual way to quickly identify the desired physical switch for maintenance or other purposes, by causing its LEDs to flash in a specified pattern.
Key Solutions

Network Convergence

The convergence of network services in the Enterprise has led to increasing demand for highly available networks with minimal downtime. Diagram 1 shows x210-24GT switches with high performance EPSR connectivity to the SwitchBlade® x8112 core chassis. This topology provides recovery in as little as 50ms, if required. Management of the network is simplified as all x-series switches run the advanced AlliedWare Plus operating system, with an industry-standard CLI, and powerful web-based GUI.
Network Flexibility

Flexible network deployment is facilitated by the smaller 9- and 16- port x210 models, shown in diagram 2. Whisper quiet with a fanless design, they can be placed in work areas and on desks without disrupting staff. AMF provides an easy yet powerful solution for managing devices with plug and play simplicity.
Product Specifications

PRODUCT	10/100/1000T (RJ-45) COPPER PORTS	SFP AND 10/100/1000T COMBO PORTS	1000X SFP PORTS	TOTAL PORTS	SWITCHING FABRIC	FORWARDING RATE
x210-9GT	8	-	1	9	18 Gbps	13.4 Mpps
x210-16GT	14	2	-	16	32 Gbps	23.8 Mpps
x210-24GT	20	4	-	24	48 Gbps	35.7 Mpps

Physical Specifications

| PRODUCT | WIDTH X DEPTH X HEIGHT | MOUNTING | WEIGHT | | PACKAGED DIMENSIONS |
			UNPACKAGED	PACKAGED	
x210-9GT	263 x 179 x 38 mm (10.35 x 7.05 x 1.50 in)	Desktop*	1.4 kg (3.09 lb)	2.6 kg (5.73 lb)	43 x 26 x 13 cm (16.9 x 10.2 x 5.1 in)

x210-24GT	440 x 210 x 44 mm (17.32 x 8.27 x 1.73 in)	Rack-mount	2.7 kg (5.95 lb)	4.0 kg (8.82 lb)	53 x 43 x 15 cm (20.9 x 16.9 x 5.9 in)

* Rack-mount kit available

Performance
▶ Up to 8K MAC addresses
▶ 256 VLANs (4K VLAN IDs)
▶ 128MB DDR SDRAM
▶ 64MB flash memory
▶ Packet Buffer memory: 512KB
▶ Supports 9kB jumbo frames
▶ Wirespeed forwarding

Reliability
▶ Modular AlliedWare Plus operating system
▶ Full environmental monitoring of PSU internal temperature and internal voltages. SNMP traps alert network managers in case of any failure

Flexibility and Compatibility
▶ SFP ports will support any combination of 10/100/1000T, 100X, 100FX, 100BX, 1000X, 1000SX, 1000LX, 1000ZX or 1000ZX CWDM SFPs

Diagnostic Tools
▶ Active Fiber Monitoring detects tampering on optical links
▶ Find-me device locator
▶ Cable fault locator (TDR)
▶ Automatic link flap detection and port shutdown
▶ Ping polling and TraceRoute for IPv4 and IPv6
▶ Port and VLAN mirroring (RSPAN)

IPv6 features
▶ Device management over IPv6 networks with SNMPv6, Telnetv6 and SSHv6
▶ NTPv6 client and server

Management
▶ Allied Telesis Management Framework (AMF) enables powerful centralized management and zero-touch device installation and recovery
▶ Console management port on the front panel for ease of access
▶ Eco-friendly mode allows ports and LEDs to be disabled to save power
▶ Web-based Graphical User Interface (GUI)
▶ Industry-standard CLI with context-sensitive help
▶ Powerful CLI scripting engine and built-in text editor
▶ Comprehensive SNMP MIB support for standards-based device management

▶ Event-based triggers allow user-defined scripts to be executed upon selected system events

Quality of Service (QoS)
▶ 4 priority queues with a hierarchy of high priority queues for real time traffic, and mixed scheduling, for each switch port
▶ Limit bandwidth per port or per traffic class down to 64kbps
▶ Wirespeed traffic classification with low latency essential for VoIP and real-time streaming media applications
▶ Policy-based QoS based on VLAN, port, MAC and general packet classifiers
▶ Policy-based storm protection
▶ Extensive remarking capabilities
▶ Taildrop for queue congestion control
▶ Strict priority, weighted round robin or mixed scheduling
▶ IP precedence and DiffServ marking based on layer 2, 3 and 4 headers

Resiliency
▶ Control Plane Prioritization (CPP) ensures the CPU always has sufficient bandwidth to process network control traffic
▶ Dynamic link failover (host attach)
▶ EPSRing (Ethernet Protection Switched Rings) with enhanced recovery for extra resiliency
▶ Loop protection: loop detection and thrash limiting
▶ PVST+ compatibility mode
▶ RRP snooping
▶ STP root guard

Security
▶ Access Control Lists (ACLs) based on layer 3 and 4 headers
▶ Configurable ACLs for management traffic
▶ Configurable auth-fail and guest VLANs
▶ Authentication, Authorisation and Accounting (AAA)
▶ Bootloader can be password protected for device security
▶ BPDU protection
▶ DHCP snooping, IP source guard and Dynamic ARP Inspection (DAI)
▶ Dynamic VLAN assignment

▶ Network Access and Control (NAC) features manage endpoint security
▶ Port-based learn limits (intrusion detection)
▶ Private VLANs provide security and port isolation for multiple customers using the same VLAN
▶ Secure Copy (SCP)
▶ Strong password security and encryption
▶ Tri-authentication: MAC-based, web-based and IEEE 802.1x

Environmental Specifications
▶ Operating temperature range:
  x210-9GT: 0°C to 50°C (32°F to 122°F)
  x210-9GT: 0°C to 45°C (32°F to 113°F) with AT-SPLX40 or AT-SPZX80
  x210-16GT: 0°C to 40°C (32°F to 104°F)
  x210-16GT: 0°C to 35°C (32°F to 95°F) with AT-SPLX40 or AT-SPZX80 or AT-SPFX/2 or AT-SPFX/15
  x210-24GT: 0°C to 40°C (32°F to 104°F)
  Derated by 1°C per 305 meters (1,000 ft)
▶ Storage temperature range:
  -25°C to 70°C (-13°F to 158°F)
  Operating relative humidity range:
  5% to 90% non-condensing
▶ Storage relative humidity range:
  5% to 95% non-condensing
▶ Operating altitude:
  3,048 meters maximum (10,000 ft)

Electrical Approvals and Compliances
▶ EMC: EN55022 class A, FCC class A, VCCI class A
▶ Immunity: EN55024, EN61000-3-levels 2 (Harmonics), and 3 (Flicker) – AC models only

Safety
▶ Standards: UL60950-1, CAN/CSA-C22.2 No. 60950-1-03, EN60950-1, EN60825-1, AS/NZS 60950.1
▶ Certifications: UL, cUL, UL-EU

Restrictions on Hazardous Substances (RoHS) Compliance
▶ EU RoHS compliant
▶ China RoHS compliant

Country of Origin
▶ China
