What's New in Virtual UTM Firewall v5.5.2-0.x

Introduction

This release note describes the new features in Virtual UTM Firewall v5.5.2-0.x.

You can obtain the software files from the Software Download area of the Allied Telesis website. Log in using your assigned email address and password.

Contact your authorized Allied Telesis support center to obtain licenses.

Caution: Information in this release note is subject to change without notice and does not represent a commitment on the part of Allied Telesis, Inc.

While every effort has been made to ensure that the information contained within this document and the features and changes described are accurate, Allied Telesis, Inc. can not accept any type of liability for errors in, or omissions arising from, the use of this information.

Virtual UTM Firewall

The Allied Telesis 10G Virtual Unified Threat Management (UTM) Firewall is an ideal integrated security platform for modern businesses. A powerful 10G firewall and threat protection is combined with comprehensive VPN capability. Easily and securely connect the head-office to branch-offices for an innovative high performance business solution.

It is a virtualized version of the AlliedWare+ Next Generation Firewall and runs on the Vista Manager Network Appliance (VST-APL).

Security enhancement: TLS version 1.2 or above required

The VST-APL operating system 1.6.1 (VST-APL 3.5.1) now supports TLS version 1.2 or above only. This improves security.

TLS v1.0 and TLS v 1.1 have been deprecated, and are not supported. Current versions of the browsers supported by the VST-APL no longer use the earlier TLS versions.

Obtaining User Documentation

Virtual UTM Firewall documentation

The Datasheet, Installation Guide, User Guide, and Release Notes for Virtual UTM Firewall are available from:

- Virtual UTM Firewall Datasheet
- Vista Manager Appliance (VST-APL) Installation Guide.
- Virtual UTM Firewall User Guide
