

IE048 Series

Industrial AC/DC Power Supply, 48VDC Output

Overview

The IE048 industrial power supplies are functional accessories for Allied Telesis products. They are ideal for Smart Cities, Industrial Ethernet, Transportation or any application requiring systems that function in harsh environments with extended operating temperatures.

The IE048 Series power supplies deliver reliable 48VDC output voltage. They are fully tested and validated to operate with Allied Telesis Industrial products.

Housed in a compact metal case with DIN rail clip, the IE048 features mechanical robustness, electromagnetic compatibility and enhanced thermal characteristics, making it ideal for exposed areas and harsh environments.

Highly efficient and stable output power provides the capability to support 150% of peak load. The nominal output voltage of 48VDC can be adjusted to match application requirements.

The AC/DC rectifier operates over the full range of AC input voltage to fit worldwide power grids. The included active Power Factor Correction circuit (PFC) reduces energy costs by eliminating reactive power and harmonics from power lines.

As well as providing efficiency, the PFC complies with international regulations. It establishes limits on the harmonic currents that can appear on an AC main line.

Key Features

- Electromagnetic immunity for industrial environments
- Highly efficient
- Active PFC
- Stable output power with 150% peak current capability
- Wide input voltage range
- Protections: peak-current, over-current and over-temperature
- Remote ON/OFF¹
- Output power confirmation relay (DC_OK)¹
- Extended operating temperature range
- Air convection cooling
- Metal case
- DIN rail mount
- Conformal coating²
- Warranty period: 5 years

¹ Available on IE048-240 and IE048-480

² Available on IE048-480/C
